

PRODUCT INFORMATION

MAGNIFYING LENSES

EHW44200[10/15/20/25]

SUMMARY

The "Mag-Lens" range of magnifying lenses is designed for use as/behind the internal backing lens in welding headshields, handshields and in compatible models of gas welding goggles.

TARGET APPLICATIONS

The Mag Lens is used to correct minor sight defects or to provide close-up views of a welding area without requiring the welder to move his head too close to the work, thus helping to reduce his exposure to the fumes that welding creates.

FURTHER INFORMATION

These lenses are available in a 4 1/4" x 2" size with magnifications of 1.0 diopter to 2.5 diopter.

As they are used internally and designed to provide no impact protection, they are not currently subject to an applicable EN/ISO standard.

ARTICLES & ACCESSORIES

Part Number	Product Description
EHW4420010	MAG LENS, 1.0 DIOPTER
EHW4420015	MAG LENS, 1.5 DIOPTER
EHW4420020	MAG LENS, 2.0 DIOPTER
EHW4420025	MAG LENS, 2.5 DIOPTER
