

CEPRO PVC WELDING SHEETS

Description

All Cepro welding sheets comply with **ISO EN 25980**, the European standard. Cepro welding sheets also have a standard width 570 mm. Welding sheets can be delivered on full rolls, or packed per 4 pieces available in several heights. The pre-packed sheets are supplied rolled in a sheet of paper and packed in a cardboard box, steel suspension rings are included.

Application

We recommend using welding sheet for large or frequent medium mechanical loads. Welding sheets are designed for use in workplaces where bystanders must be protected against the hazardous radiation emitted during welding work. They provide protection against dangerous Blue Light and Ultra Violet (UV) rays. In case of prolonged exposure these rays can cause actinic conjunctivitis and even cataracts.

Welding sheets also protect the welder against the reflection of the welding light. Cepro produces welding sheet in four colours, all complying with the European standard **ISO EN 25980**.

Cepro products offer protection. They prevent actinic conjunctivitis, cataract, burnt skin, create a safe environment for bystanders and considerably reduce medical costs.

Conditions for use

Cepro welding sheets are self-extinguishing and therefore withstand welding sparks. They are, however, not suitable as a welding blanket and do not withstand open fire and intense heat. Welding sheets offer visual protection against dangerous radiation but are not suitable for supervising welding works or as a substitute for welding.

Characteristics

Cepro welding sheets are made of PVC.

Dimensions

The following standard dimensions are available:

570 x 1 x 1.600 mm, for width of 2.000 mm
570 x 1 x 1.800 mm, for width of 2.000 mm
570 x 1 x 2.000 mm, for width of 2.000 mm
570 x 1 x 2.200 mm, for width of 2.000 mm
570 x 1 mm welding sheet, roll length 50 meter
